

Solving Problems

Weekly Report 22- 2/18 to 2/24

This week has been productful and calming. The final product process has begun. The research is starting and the planning has begun. All of this progress has helped calm many nerves.

The what-if's from last week have become less of a stresser. Talking to Mrs. Crowder helped with this a lot. She was excited and talking about how much of a success this will be, which is significantly calming. The fear of failure is still there, and obviously always will be there, but it is not as bad as it was before the meeting. The meeting brought around steps in planning and designing that would occur. This was helpful because seeing ideas and plans for things makes them seem less scary.

The problem to focus on this week is research. There is a lot to find and learn regarding location of my design and how to actually create it both 2D and 3D. There is one source currently being used, but there needs to be more sources. The problem here is finding ones that have the information needed, such as safety codes and computer program guides. Maybe asking my mentor for more sources or books would be helpful, as she knows the field more.
